## Case Study: Target Field Digital Clubhouse

### Ballpark

#### Project Information

Project: Target Field Digital Clubhouse

Location: Minneapolis, MN

Architect: HGA

GC: M. A. Mortenson Company

Completion: April 2014

Scope: From design to installation, Trex Commercial Products was there to make sure this new age clubhouse was ready for the MN Twins home opener. Located in the left field corner of the Club level, this newest addition to Target Field allows you to record your day by taking a photo at the selfie mirror, interact with friends and other fans via social media while utilizing the charging stations and is all centered around an old dugout bench from the Metrodome.

We were delighted to showcase some of our architectural metal capabilities including the structural steel Clubhouse, aluminum louvered canopies, wood paneling and aluminum rolling cabinets.
