Project Information

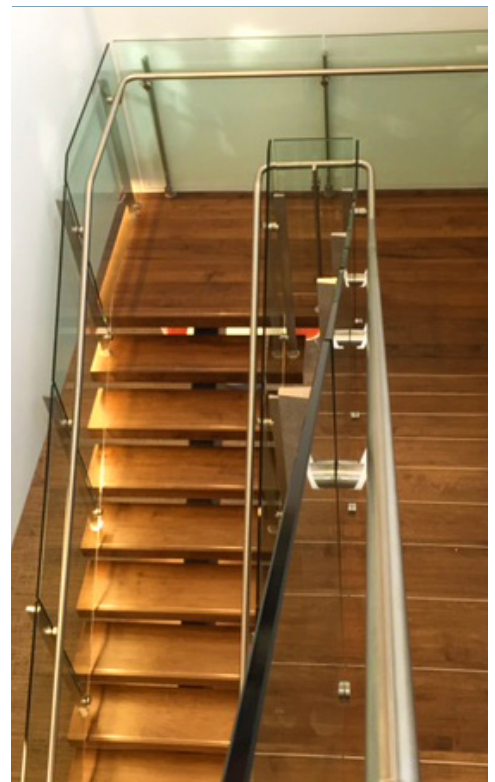

Project: Celgene Office
Location: Summit, NJ
Architect: Highland Associates, LTD
Glazier: Boss Glass Company
Glass Fab.: JE Berkowitz
Completion: December 2015
Scope: Celgene recently added 180,000 sq. ft. of office space to their Summit, NJ campus, and utilized Dot series railing for the stairs and balcony overlooks. For the stair application, our patented trapezoidal posts were welded to the steel stair tread. The balcony overlook utilized a wet grout attaching the posts into steel sleeves which were welded to the structural steel. This railing system utilized a 1/2" clear tempered glass infill panel with film applied post installation to achieve desired look.
