Metropolitan State University (AES Building)

Higher Education

Project Information

Project: Metropolitan State University - Aerospace and Engineering Sciences (AES)
Location: Denver, CO
Architect: Anderson Mason Dale Architects
GC: GH Phipps Construction
Glazier: Horizon Glass
Scope: Metropolitan State University in Denver, Colo., opened its new Aerospace and Engineering Sciences building. This innovative facility offers a state-of-the-art home for the University's industrial design, engineering, and computer sciences programs. The sleek design of Trex Commercial Products custom glass stair railing with wooden LED handrail complements the building's modern aesthetic, while also providing a unique functional feature - a built-in learning stair incorporated into the staircase.

"Puck"-style LED lighting is built directly into the custom wooden handrail for a dramatic effect that also enhances safety and traffic flow.

Trex Commercial Products engineered custom pressure plates, mounted to a steel stinger, to accommodate the commercial railing loading requirements while preserving the architect's minimalist vision for the space.
