Perimeter Mall

Retail Mall Renovation (Phase 2)

Project Information

Location: Atlanta, GA
 Architect: Architecture Design Collaborative
 GC: Culp Construction Company
 Scope: Trex Commercial Products provided more than 1,100 lf of Track Rail along the interior stairs and common area balcony overlooks in the multi-phase transformation of Atlant's Perimeter Mall. The addition of stainless steel top cap and cladding achieves the desired modern aesthetic, while the glass infill allows natural light to flow into the heart of the mall creating the desired open-air-like shopping destination. With the strategic use of exterior-style materials and colors, visitors now enjoy an al fresco shopping experience without having to worry about unpredictable outdoor elements.

Clear half-inch glass is secured within an aluminum shoe using Trex Commercial Products' dry glaze GlassNut™ Track Rail system, with a black gasket finishing off the look.

What's a GlassNut™ Dry Glaze System?

Trex Commercial Products' GlassNut dry glaze system provides a fast and cost effective alternative to traditional wet glazed systems. The GlassNut utilizes a threaded setting block and simple locking nut to secure 1/2" or 3/4" glass infill into the extruded aluminum base shoe system. A gasket can be installed to finish the look of the project. Glass panels are easily replaced by loosening the threaded Nut, setting the new glass panel in, and re-tightening to proper torque specifications.

Custom stainless steel cladding forms fit over the aluminum shoe and extend below to cover the top-mounted shoe, lending a continuous look on balconies.
